

Analiza softvera za otkrivanje plagiranja u znanosti i obrazovanju

Tamara Birkić, Draženko Celjak,
Marko Cundeković, Sabina Rako

Zašto softveri za otkrivanje plagijata?

- daju povratnu informaciju koliki postotak sadržaja je identičan s drugim izvorima
- mogućnost provjere radova od strane studenta i nastavnika
- doprinose podizanju svijesti među studentima o etičnosti
- potiču uporabu pravilnog parafraziranja i citiranja kod studenata

The Goliath of the Sea
BY ELLIOTT PEQUOD

The majestic blue whale, the goliath of the sea, certainly stands alone within the animal kingdom for its adaptations beyond its massive size. At 30 metres (98 ft) in length and 190 tonnes (210 short tons) or more in weight, it is the largest existing animal and the heaviest that has ever existed. Despite their incomparable mass, aggressive hunting in the 1900s by whalers seeking whale oil drove them to the brink of extinction. But there are other reasons for why they are now so endangered.

The blue whale's common name derives from bluish-hue that covers the upper side of its body, while its Latin designation is *Balaenoptera musculus*. The blue whale belongs to the Mysticeti suborder of cetaceans, also known as baleen whales, which means they have fringed plates of fingernail-like material, called baleen, attached to their upper jaws. Blue whales feed almost exclusively on krill; though they also take small numbers of copepods. An adult blue whale can eat up to 40 million krill in a day.

These gargantuan beasts used to dominate all the oceans of the Earth up until the late nineteenth century, when the technology was developed to effectively hunt and harvest them. In 1864, the Norwegian Svend Foyn equipped a steamboat with harpoons specifically designed for catching large

Urkund

The Urkund interface shows a document analysis process. On the left, a preview window displays the first page of a PDF titled 'Znanstveni članak_2015.pdf' (D18134103), dated 2016-02-23 09:30 (~01:00). The document content is a parental assessment of speech and language development for children older than three years, written in Croatian. On the right, the 'List of sources' panel shows one external source: 'Logopedija, 5, 2, 2015, 25-33 Darija Novosel Manuela Pilatuš Marina Olujić Jelena Kovač Kraljević Sveučilište u Zagrebu, Edukacijsko-rehabilitacijski fakultet, Odsjek za logopediju, Laboratorij za psiholingvistička istraživanja Roditeljska procjena djetetovog jezičnog i govornog razvoja nakon treće godine Parental assessment of speech and language development for children older than three years'. The URL is http://hrcak.srce.hr/file/221379. The status bar at the bottom indicates the document is 100% analyzed.

Zaključak

- odabir softvera ovisi o potrebama pojedine institucije
- uključiti sve sudionike procesa u odluku o uporabi softvera za plagijarizam
- potrebno uključiti sve sudionike procesa u odluku o uporabi softvera za plagijarizam
- stalna nadogradnja softvera i pojavljivanje novih softvera
- kandidati za primjenu: PlagScan i Urkund

Analiza dostupna na <http://www.srce.unizg.hr/plagijarizam>
