O snapshotima

Snapshote treba redovito brisati, čim više nisu potrebni. Snapshoti stariji od 2 dana mogu biti obrisani u bilo kojem trenutku.

Kreiranje snapshota

Na stranici **Service Broker** na tabu Resources potrebno je proširiti strelicu pokraj naziva poslužitelja koji počinje nazivom ustanove (a sadrži još i vrstu resursa i korisničko ime)

The screenshot shows the 'Service Broker' interface. The 'Resources' tab is selected. In the left sidebar, 'Resources' is expanded, showing 'All Resources', 'Virtual Machines', 'Volumes', and 'Networking & Security'. The main area displays 'Deployments' with 3 items. The first deployment is highlighted, and its expand/collapse icon (three dots) is circled in red.

pa kliknuti na tri točkice pored naziva poslužitelja

The screenshot shows the 'Service Broker' interface. The 'Resources' tab is selected. In the left sidebar, 'Resources' is expanded. The main area displays 'Deployments' with 3 items. The first deployment is expanded, and the 'repo.srce.hr-84' resource is highlighted. The expand/collapse icon (three dots) for this resource is circled in red.

a zatim s padajućeg izbornika odabrati **Create Snapshot**:

 **srce** Service Broker
